

Repel Rabbit

COMPOSITION

Component	Content
Capsicum Oleoresin (Hot Pepper Extract)	5% w/w

DESCRIPTION

Repel Rabbit is a powerful botanical repellent with certain bioinsecticidal action, formulated from extracts of seeds and fruits from various plant species. When applied to crops, it creates an unfavorable environment for insects and animals, producing a feeding deterrent effect and discomfort that hinders the development of their biological cycles.

Through the vapors it emits, Repel Rabbit effectively repels rabbits, hares, birds, and other crop-damaging animals. It presents a spicy and irritating action that works primarily through contact but also has systemic and translaminar effects upon penetrating leaves. It acts as a repellent against insects and lepidopteran larvae.

DOSE AND APPLICATION

Method	Dose
Foliar Application	200–300 cc/hL
Fertigation	2 L/ha per week (as pest deterrent)

RECOMMENDATIONS AND PRECAUTIONS

Apply early in the morning or late in the afternoon. Do not mix with copper or sulfur-based products. Use spray water with neutral or slightly acidic pH. In case of mixing, consult the company's technical service. Avoid contact with eyes and skin; if contact occurs, rinse with plenty of water. If irritation persists, wash with water containing baking soda to neutralize. Use gloves and protective goggles. Do not ingest the product. If dizziness occurs, move to a well-ventilated area.
